2.PRODUCTION TECHNOLOGY

2.1. Production process

2.1.1. Machinery and equipment

- Mixer with agitator
- Digital scales
- Pumps
- Flow meters
- Thermometers
- Setting tanks for the semi-finished product
- Filling line
- Control scales

2.1.2. Production process description:

All raw materials/oils come with Quality Certificate from the manufacturer.

Dispense all oils sequentially. Stirrer and heating up to 30°C are included.

When the set temperature is reached, the heating is stopped. Stir until a clear homogeneous mixture is obtained, then add Tocobiol C (warmed to 30°C and well mixed) and lavender essential oil. Stir until completely homogeneous. The product is drained in clean, disinfected containers at a temperature of 25-28 °C and immediately submitted for packaging.

The packing process starts, if the physical, chemical, and microbiological test results show that the product complies with all requirements.

Production is consistent with Good manufacturing and Good hygienic practices / GMP-Cosmetics /, under Regulation (EO) 1223/2009, Article 11, and item 2 (C)
